

Growing Gold Resources in Quebec's Abitibi

121 Mining Investment, New York

October 21-22, 2024

Cautionary Note Regarding Forward-Looking Information

The information in this document may contain forward-looking statements or information (collectively, "FLI") within the meaning of applicable Canadian securities legislation. FLI is based on expectations, estimates, projections and interpretations as at the date of this document.

All statements, other than statements of historical fact, included herein are FLI that involve various risks, assumptions, estimates and uncertainties. Generally, FLI can be identified by the use of statements that include, but are not limited to, words such as "seeks", "believes", "anticipates", "plans", "continues", "budget", "scheduled", "estimates", "expects", "forecasts", "intends", "projects", "predicts", "proposes", "potential", "targets" and variations of such words and phrases, or by statements that certain actions, events or results "may", "will", "could", "would", "should" or "might", "be taken", "occur" or "be achieved."

FLI in this document may include, but is not limited to: statements regarding the results of the PEA; the potential future performance of the Common Shares; future drill results; the Company's ability to convert inferred resources into measured and indicated resources; environmental matters; stakeholder engagement and relationships; parameters and methods used to estimate the MRE's at Fenelon and Martiniere (collectively the "Deposits"); the prospects, if any, of the Deposits; future drilling at the Deposits; and the significance of historic exploration activities and results.

FLI is designed to help you understand management's current views of its near- and longer-term prospects, and it may not be appropriate for other purposes. FLI by their nature are based on assumptions and involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance, or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such FLI. Although the FLI contained in this document is based upon what management believes, or believed at the time, to be reasonable assumptions, the Company cannot assure shareholders and prospective purchasers of securities of the Company that actual results will be consistent with such FLI, as there may be other factors that cause results not to be as anticipated, estimated or intended, and neither the Company nor any other person assumes responsibility for the accuracy and completeness of any such FLI. Except as required by law, the Company does not undertake, and assumes no obligation, to update or revise any such FLI contained in this document to reflect new events or circumstances. Unless otherwise noted, this document has been prepared based on information available as of the date of this document. Accordingly, you should not place undue reliance on the FLI, or information contained herein.

Furthermore, should one or more of the risks, uncertainties or other factors materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in FLI.

Assumptions upon which FLI is based, without limitation, include: the results of exploration activities, the Company's financial position and general economic conditions; the ability of exploration activities to accurately predict mineralization; the accuracy of geological modelling; the ability of the Company to complete further exploration activities; the legitimacy of title and property interests in the Deposits; the accuracy of key assumptions, parameters or methods used to estimate the MREs and in the PEA; the ability of the Company to obtain required approvals; geological, mining and exploration technical problems; failure of equipment or processes to operate as anticipated; the evolution of the global economic climate; metal prices; foreign exchange rates; environmental expectations; community and non-governmental actions; and, the Company's ability to secure required funding. Risks and uncertainties about Wallbridge's business are discussed in the disclosure materials filed with the securities regulatory authorities in Canada, which are available at www.sedarplus.ca.

Cautionary Note to United States Investors

Wallbridge prepares its disclosure in accordance with NI 43-101 which differs from the requirements of the U.S. Securities and Exchange Commission (the "SEC"). Terms relating to mineral properties, mineralization and estimates of mineral reserves and mineral resources and economic studies used herein are defined in accordance with NI 43-101 under the guidelines set out in CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the Canadian Institute of Mining, Metallurgy and Petroleum Council on May 19, 2014, as amended. NI 43-101 differs significantly from the disclosure requirements of the SEC generally applicable to US companies. As such, the information presented herein concerning mineral properties, mineralization and estimates of mineral reserves and mineral resources may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the U.S. federal securities laws and the rules and regulations thereunder.

Cautionary Notes and Definitions Regarding PEA

On June 26, 2023, the Company announced positive results from the PEA completed on Fenelon. The 2023 MRE formed the foundation for the PEA which assessed the potential for a predominantly underground bulk mining operation at Fenelon. The Company cautions that the results of the PEA are forward-looking and preliminary in nature and include inferred mineral resources that are considered too speculative geologically to have economic considerations applied to them to be classified as mineral reserves. There is no certainty that the results of the PEA will be realized. The PEA financial economic analysis is significantly influenced by gold prices. The following summary includes certain non-IFRS financial measures, such as free cash flow, initial capital expenditures, sustaining capital expenditures, total cash costs and all in sustaining costs, which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS. The disclosure of such non-IFRS financial measures is required under National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43-101") and has been prepared in accordance with NI 43-101. Although reconciliations to equivalent historical measures are not available. Please refer to the cautionary language and non-IFRS financial measures for detailed definitions and descriptions of such measures.

QP - Statement

The scientific and technical information of the Company and of the Fenelon, Martinière and Grasset properties included in this presentation have been reviewed and approved by Francois Chabot, Eng., Technical Studies Manager of Wallbridge and a Qualified Person as defined by NI 43-101.

All results are reported in Canadian dollars unless otherwise indicated

Non-IFRS Measures

Wallbridge has included certain non-IFRS financial measures in this presentation, such as free cash flow, initial capital expenditures, sustaining capital expenditures, total cash costs and all in sustaining costs, which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS. As a result, these measures may not be comparable to similar measures reported by other companies. Each of these measures used are intended to provide additional information to the user and should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS. Non-IFRS financial measures used herein and common to the gold mining industry are defined below.

Free cash flow was estimated as the amount of cash generated by Fenelon after all operating and capital expenditures have been paid.

Initial and sustaining capital expenditures in the PEA were estimated based on current costs received from vendors as well as developed from first principles, while some were estimated based on factored references and experience from similar operating projects. Initial capital expenditures represent the construction and development costs to achieve commercial production and sustaining capital expenditures represent the construction and development costs subsequent to commercial production. A description of the significant cost components for initial and sustaining capital costs included in the PEA are summarized below:

Cost Element	Initial Capital (\$M) ^{1,2}	Cost Element	Initial Capital (\$M) ^{1,2}		Payable Ounces	LOM Costs (Millions)	US\$ Per Ounce
Mill	220	Production Shaft	143				
Paste Plant	46	Mining Equipment	140	Cash Operating Costs	2,606,384	2,299,4	679
Tailings and Water Treatment	36	Development	158	Royalties		237.2	70
Capitalized Operating (Pre-Production)	99	Tailings & Water Treatment	63	Total Cash Costs		2,536.6	749
Surface Civil & Infrastructure	87	Paste Distribution Network	13	Sustaining Capital Expenditures and Closure		594.4	175
Mining Equipment	18	Underground Infrastructure	45	All in Sustaining Costs		3,131.0	924
Underground Development	83	Surface Infrastructure	26				
Hydro Electric Line & Distribution	55	Closure	8				
Total Initial Capital	\$645	Total Sustaining Capital	\$594				

¹ All values stated are undiscounted. No depreciation of costs was applied.

² Non-IFRS financial performance measures with no standardized definition under IFRS.

¹ All values stated are undiscounted. No depreciation of costs was applied.

² Non-IFRS financial performance measures with no standardized definition under IFRS.

Total cash costs are reflective of the cost of production. Total cash costs reported in the PEA include mining costs, processing, general and administrative costs of the mine, off-site costs, refining costs, transportation costs and royalties. Total cash costs per ounce is calculated as total cash costs divided by payable gold ounces.

All-in sustaining costs and all-in sustaining costs per ounce are reflective of all of the expenditures that are required to produce an ounce of gold from operations. All-in sustaining costs reported in the PEA include total cash costs, sustaining capital, closure costs, but exclude corporate general and administrative costs. All-in sustaining costs per ounce is calculated as all-in sustaining costs divided by payable gold ounces.

A description of the significant cost components that make up the forward looking non-IFRS financial measures of total cash costs and all in sustaining costs per ounce of payable gold produced is shown in the table.

0.63 Moz Au Inferred

Fenelon Gold Project

2023 Mineral Resource Estimate
2.37 Moz Au Indicated
1.72 Moz Au Inferred

Detour Lake Mine

AEM, Dec 31, 2023
Reserves: 19.9M Oz
Resources: 18.5M Oz (Measures Indicated)
2023 Production 677,446 oz gold

Northern Abitibi

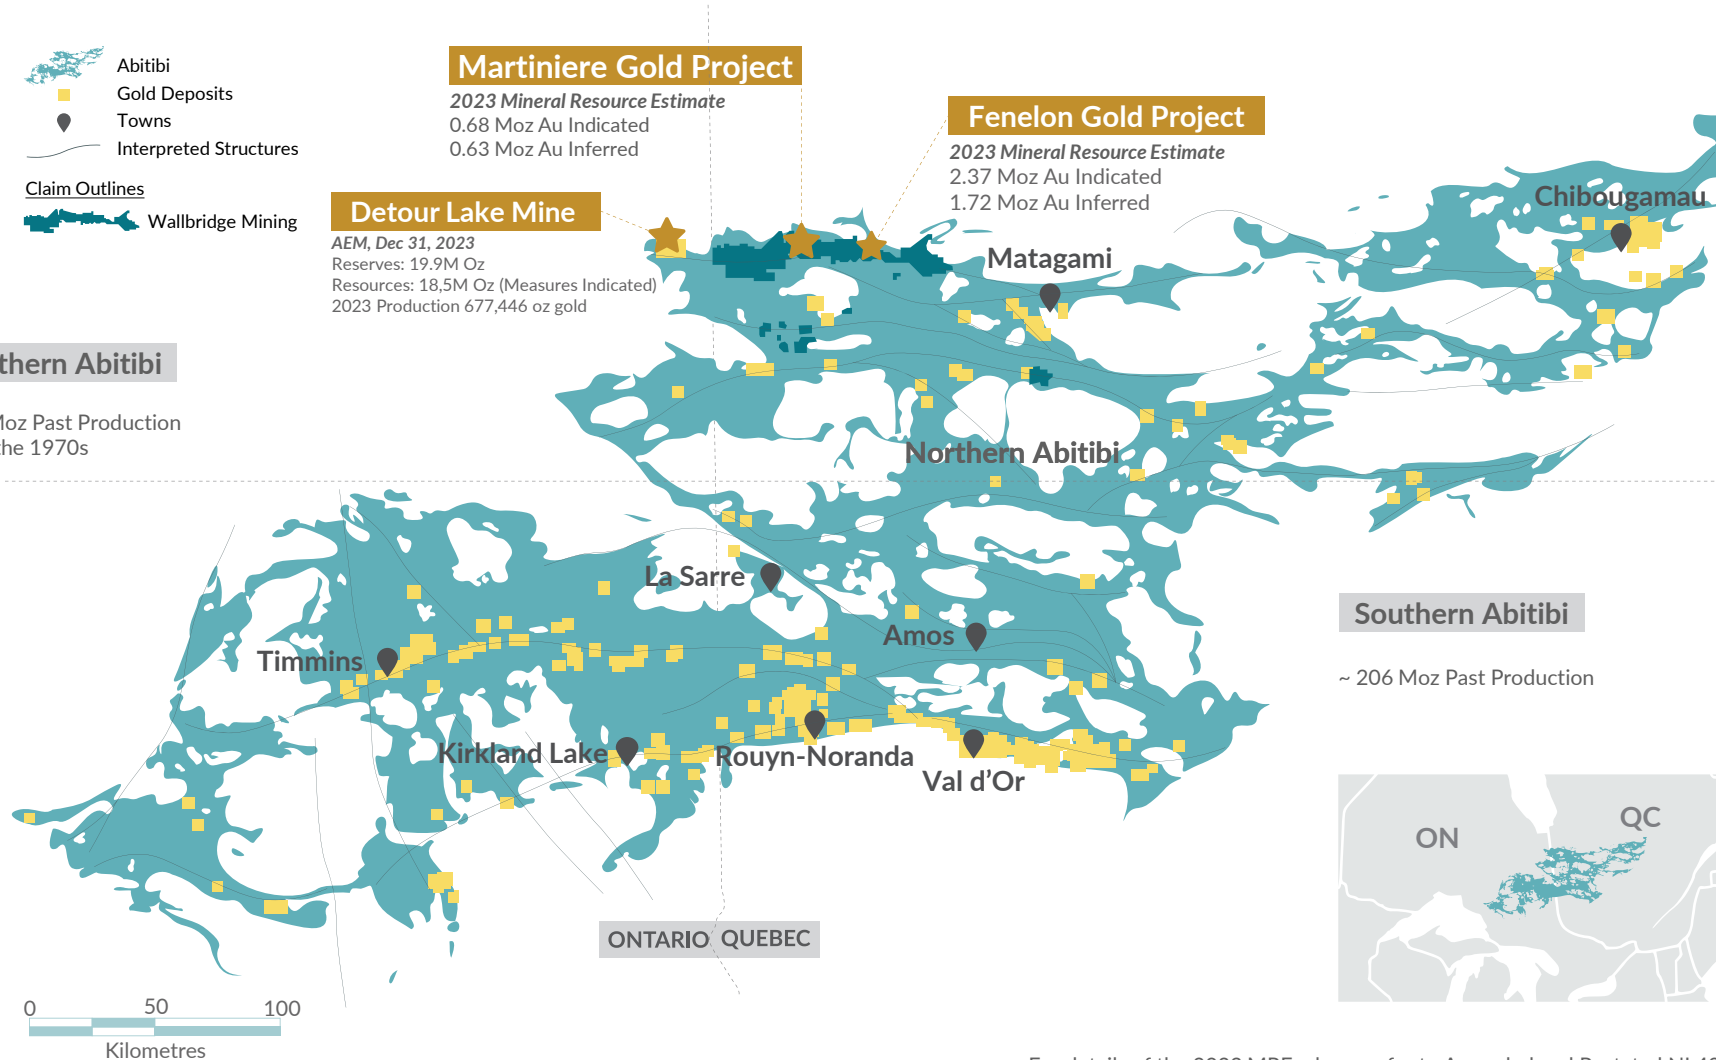

~ 15 Moz Past Production
Since the 1970s

Southern Abitibi

~ 206 Moz Past Production

Northern vs. Southern Abitibi

- Similar geology
- World-Class potential demonstrated (40 Moz Detour Lake)
- Less exploration maturity due to:
 - Less accessible in the past
 - Farther from urban centers
 - Limited surface outcrops

For details of the 2023 MRE, please refer to Amended and Restated NI 43-101 Technical Report filed on December 29, 2023, on SEDAR+.

2023 Year in Review

Unlocking Value on Strategic Land Package

- ✓ Updated MRE for Detour-Fenelon Gold Trend Property (Fenelon and Martiniere)
- ✓ Completed positive PEA on Fenelon Gold Project
- ✓ Drilled ~49,000 m on the Detour-Fenelon Gold Trend Property
- ✓ Discovered new greenfield gold mineralization at Grasset Gold and in the vicinity of Fenelon and Martiniere MREs
- ✓ Achieved 5 years without a lost time safety incident (Dec. 31, 2023)

2024 Program

Advance Martiniere and Fenelon Toward Combined PEA for 2026

Test regional greenfields exploration targets for discovery

2024 Work Program	Drilling (m)	Budget (M)
Martiniere – resource and exploration drilling (includes \$900,000 of technical and environmental studies)	13,000	\$8.9
Fenelon – expansion of known mineralization and exploration drilling (including \$900,000 of technical and environmental studies)	5,000	\$4.5
Regional exploration – exploration drilling, geophysics and others	5,000	\$3.6
Capital expenditures		\$0.2
General & administrative costs		\$4.0
Total		\$21.2

Strong Technical Team

2024 Objectives

H1 2024

- ✓ Complete Fenelon Ph1 Resource Delineation & Infill Drilling
- ✓ Complete Martiniere Ph1 Drilling: Metallurgical/Geotechnical/Delineation
- ✓ Initiate Martiniere Metallurgical & Geotechnical Studies
- ✓ Initiate Martiniere Environmental Baseline Studies

H2 2024

- Initiate Martiniere Ph2 Drilling: Explore Satellite Targets to expand resource
- Initiate Fenelon Ph2 Resource Delineation & Infill Drilling
- Initiate Regional Exploration Drill Testing of Priority Targets
- Advance Technical Studies

Continual Improvement

 <p>Social Responsibility</p>	<ul style="list-style-type: none"> - Local sourcing from Abitibi to every extent possible - Local hiring from Abitibi and surrounding First Nation communities - Supporting business startup - Supporting research projects 	 <p>Health, Safety, & Wellbeing</p>	<ul style="list-style-type: none"> - Prioritizing EHS system evolution - Health, Safety, Environmental and Community Policies in place - Achieved 5 years without a lost time accident
 <p>Environment</p>	<ul style="list-style-type: none"> - Inaugural ESG report in 2022 - Reducing GHGs by implementing group transportation - Discharging water to Directive 019 at Fenelon - Cleanup of sites from previous owners 	 <p>Cultural Heritage & Diversity</p>	<ul style="list-style-type: none"> - About 18% Indigenous workforce - Developed cultural awareness program - Constructed cultural center - Signed PDA with Cree Communities
 <p>Economic Contributions</p>	<ul style="list-style-type: none"> - Funded \$1.5M of road improvements - We use regional suppliers as much as possible - Encourage service providers to include Indigenous components within their business 	 <p>Governance</p>	<p>Built on:</p> <ul style="list-style-type: none"> - Ethics and transparency - Accountability - Responsibility - Risk management

Environment, Permitting

Strong Partnership with First Nations

Stakeholder Engagement

- Over 130 engagement activities with stakeholders
- Regular meetings with First Nation communities of Washaw Sibi, Waskaganish and Abitibiwinni (Pikogan)
- Pre-development agreement in place with Cree communities of Washaw Sibi and Waskaganish
- About 18% of workforce from First Nations

Permitting, current status:

- Meeting obligations for effluent regulations (pit dewatering)
- Required permits for surface drilling

Permitting, ongoing work:

- Acquisition of baseline environmental knowledge on Fenelon property since 2021
- Physical and biological environment characterization: Hydrogeological, ambient air quality, terrestrial vegetation and wetlands, fauna
- To date, no major environmental issues have been identified in work undertaken at the Fenelon project

¹ Total cash costs include mining, processing, tailings, surface infrastructure, transport, G&A and royalty costs.

² Non-IFRS financial performance measures with no standardized definition under IFRS. Refer to note on slide 3 of this presentation.

³ All-in-sustaining costs ("AISC") include total cash costs, sustaining capital expenses to support the ongoing operations, and closure and rehabilitation costs divided by payable gold ounces.

⁴ Assumed gold price of US \$1,750 per ounce.

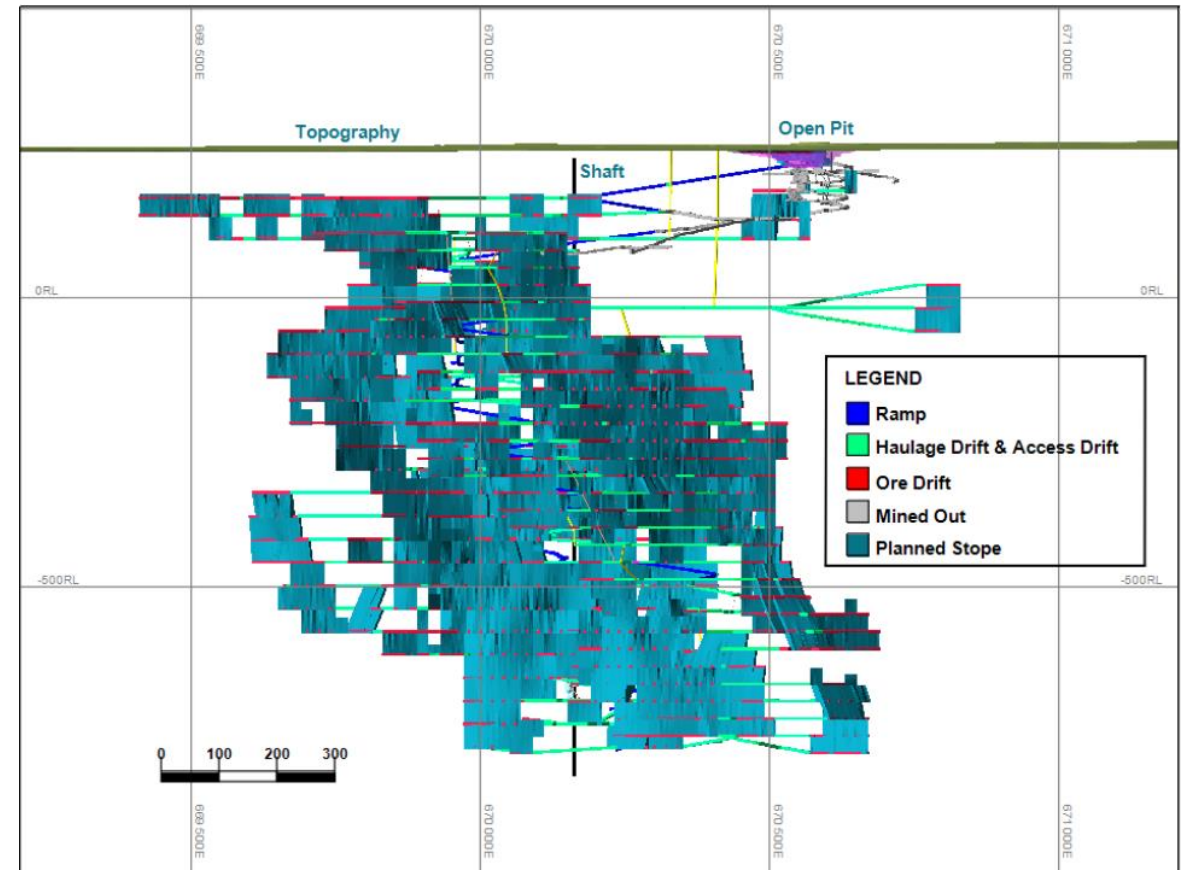

Fenelon PEA Approach

First Principles Approach, Realistic Costs

PEA Approach

- First principles: new project starting with a clean slate
- Stope optimization: Iterative process to develop a large UG operation based on January 2023 MRE, rock mechanics and projected stope productivity
- Trade-off studies: material handling, tailings management, mobile equipment
- Capex: Integrate existing infrastructure utilizing a phased approach
- Opex: Detailed evaluation, current (2023) costs; benchmarking against similar operations

Fenelon PEA Opportunities

Open In All Directions And Still Growing

Opportunity	Potential Benefits to:
Additional infill drilling at Fenelon	Increase the resource grade and ounces and convert more inferred to measured and indicated categories
Additional exploration drilling at Fenelon	Increase the mineral resources and extend mine life since the deposit is open in all directions
Additional technical studies (borrow pits, geotechnical investigation, hydrogeology, geochemical)	Improve project economics by reducing the capital requirements and operating costs
Additional geotechnical/rock mechanics	Reduce crown pillar thicknesses thus increasing overall ounces
Additional metallurgical studies, paste fill testing, and tailings testing	Lower project operating costs
Additional waste rock sampling	Identify clean waste rock to reduce site infrastructure costs
Additional drilling at Martiniere	Add organic production growth by increasing mineral resource and converting from inferred to measured and indicated categories
Additional exploration outside the current mineral resources	Identify new discoveries and add organic production growth considering the large, underexplored land package

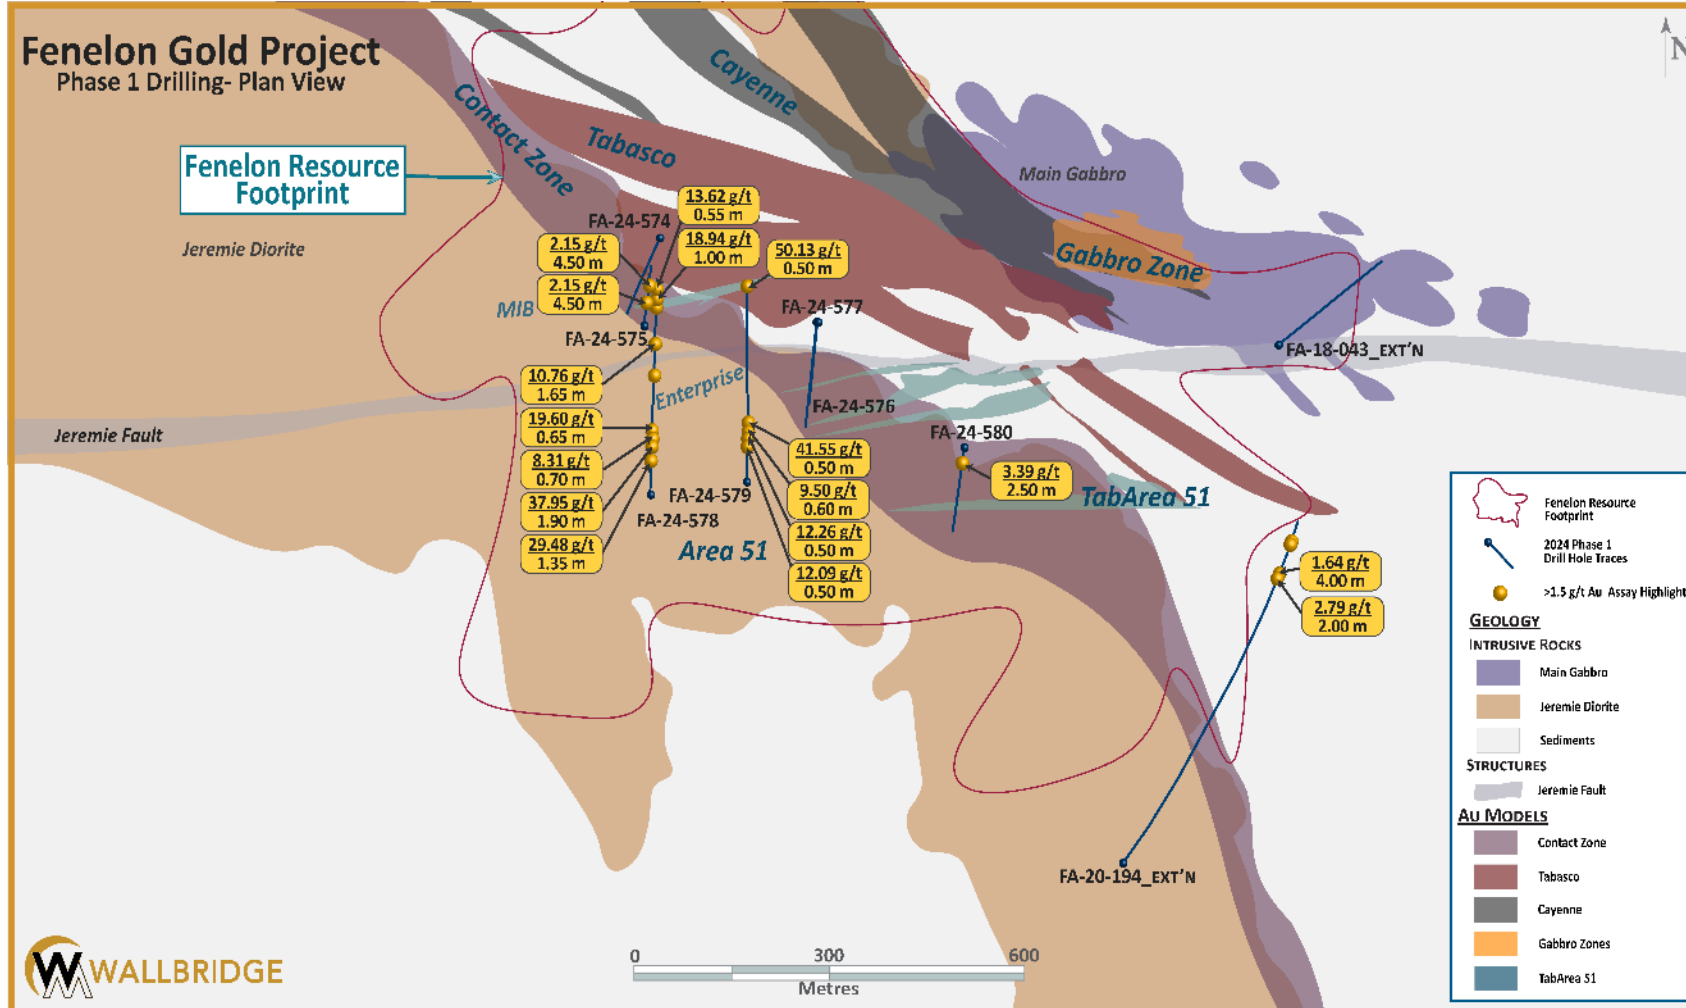

Fenelon First Half 2024 Exploration Advances

Fenelon Resource Delineation & Infill Drilling

Program Highlights

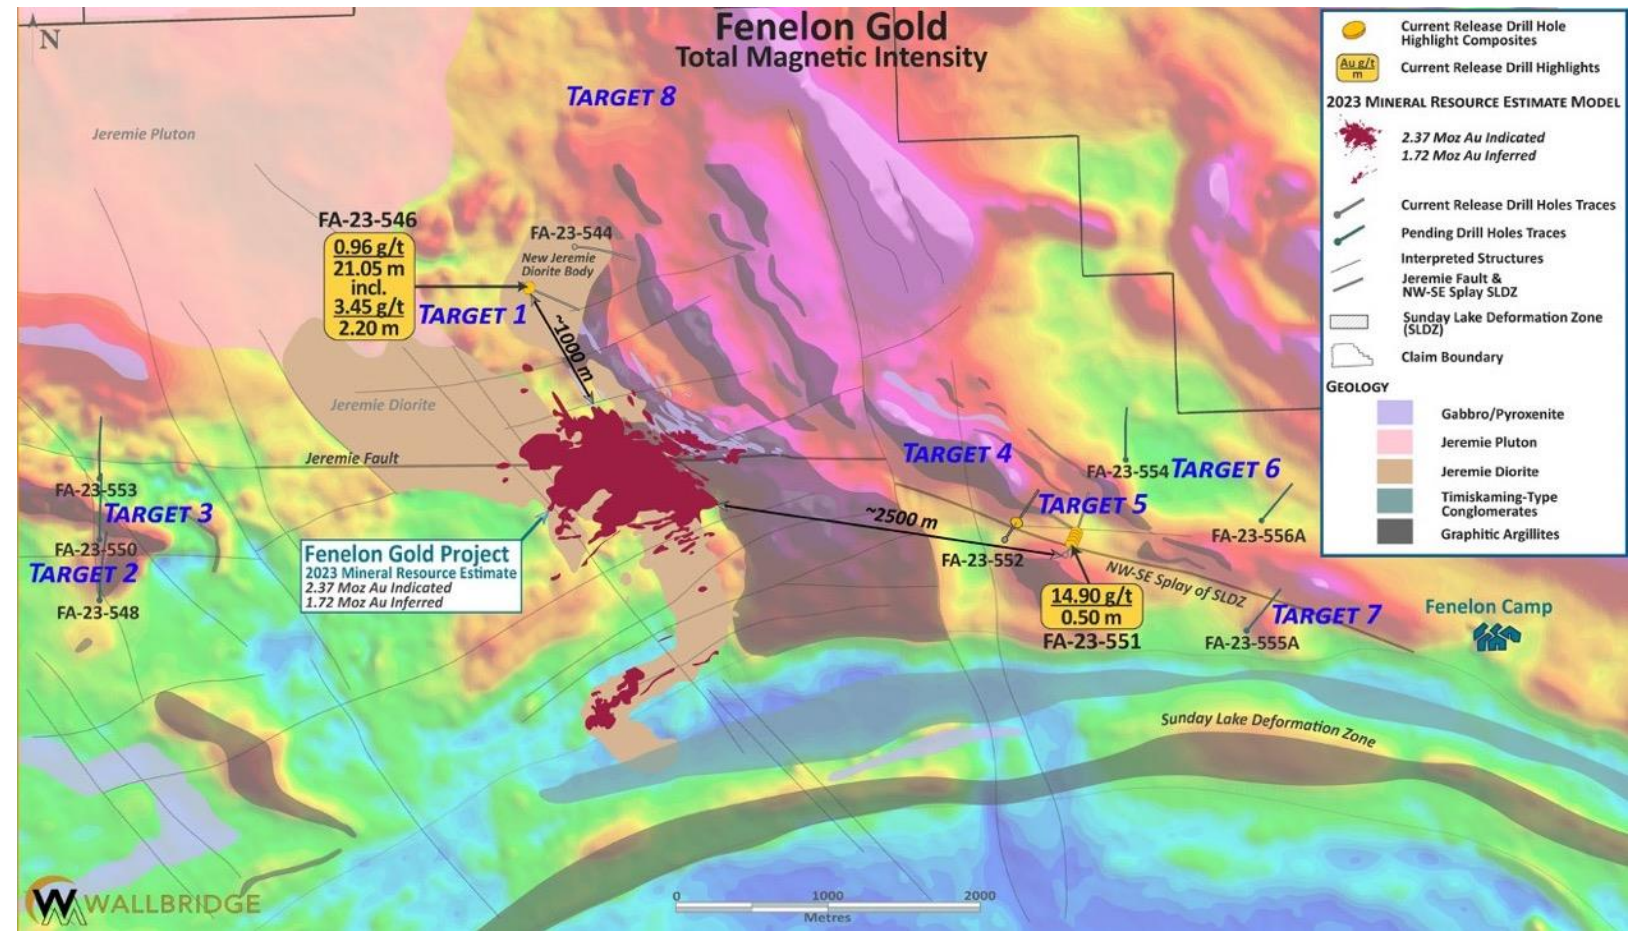

- 9 holes totaling 2,400 metres targeting Area 51 Enterprise, Contact and Tabasco zones
- Multiple high-grade gold intercepts along Area 51 Enterprise zone at depths ranging from 40 to 150 metres below surface
- Achieved further confirmation of gold grade continuity along Contact and Tabasco zones
- Extended Contact and Tabasco zone gold mineralization beyond eastern limits of the 2023 MRE

2023 Exploration Advances

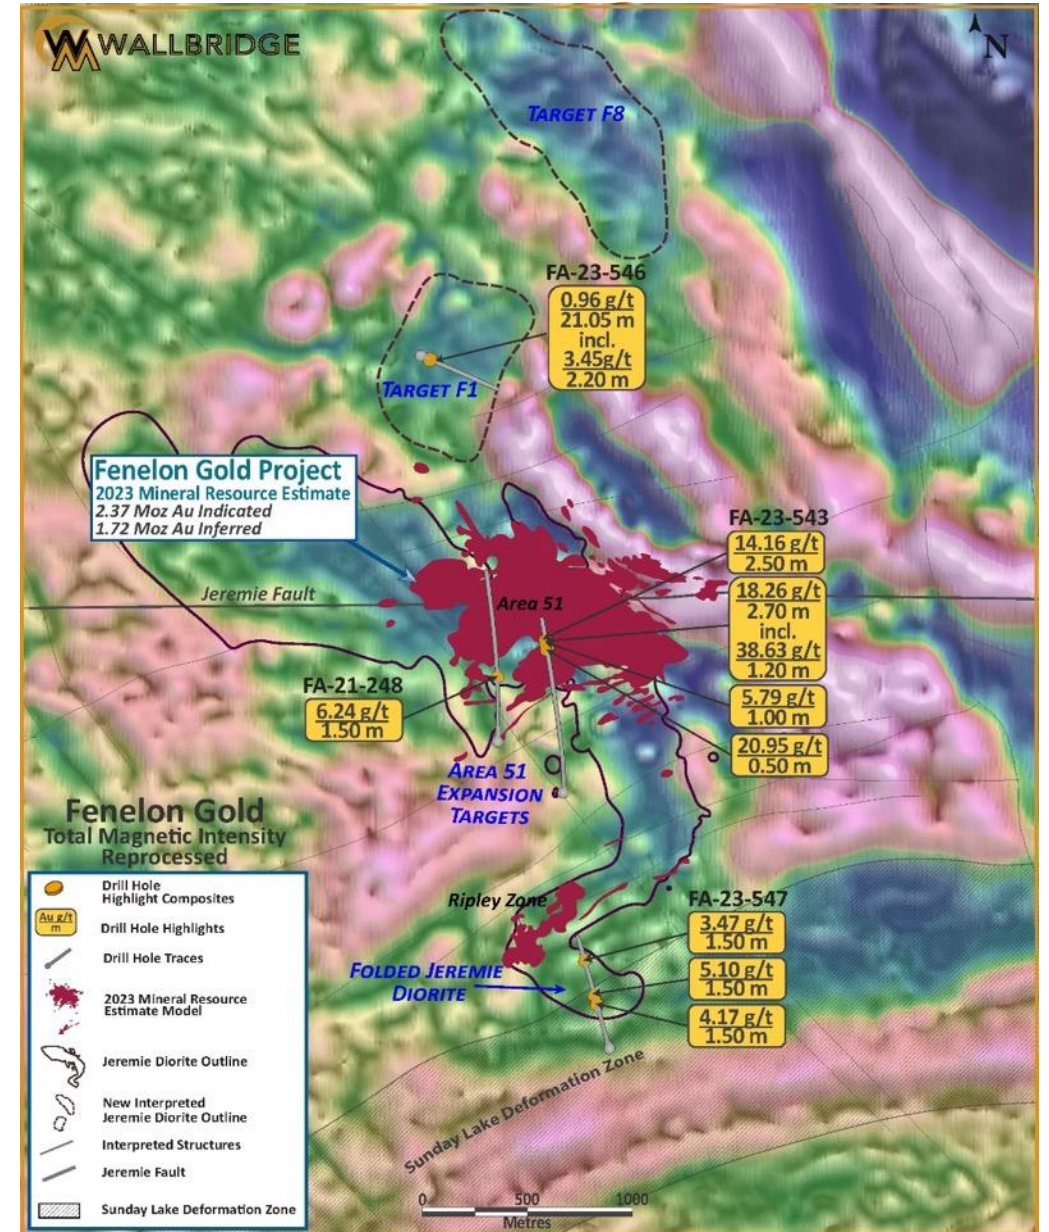

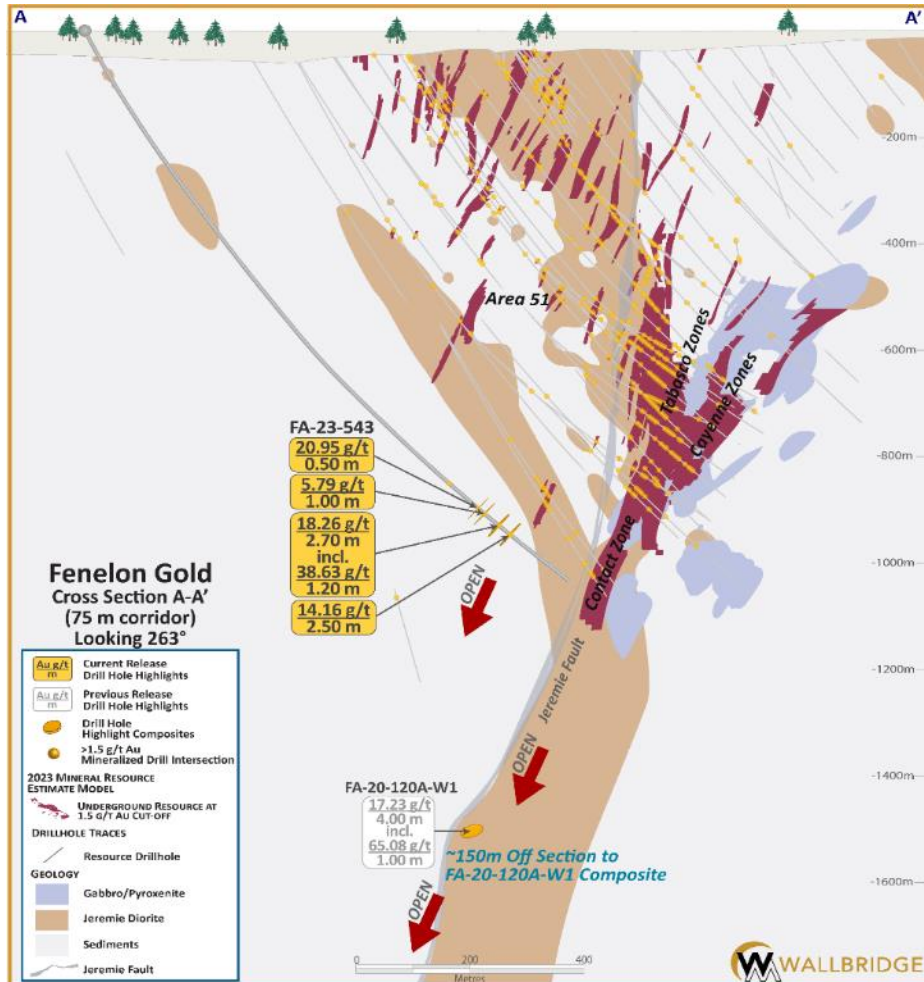

Two New Prospective Satellite Gold Targets Identified at Fenelon

The Target 1 intersection, located in a newly-discovered Jeremie Diorite body, has now opened up a new area for future exploration and shows the excellent potential to significantly expand the known extent of the mineralized footprint of our flagship project. The area extending several kilometres east of the Fenelon deposit had been identified as having the right geologic ingredients for gold deposition. Our initial results at Target 5 confirm our exploration thesis here.

2023 Exploration Advances

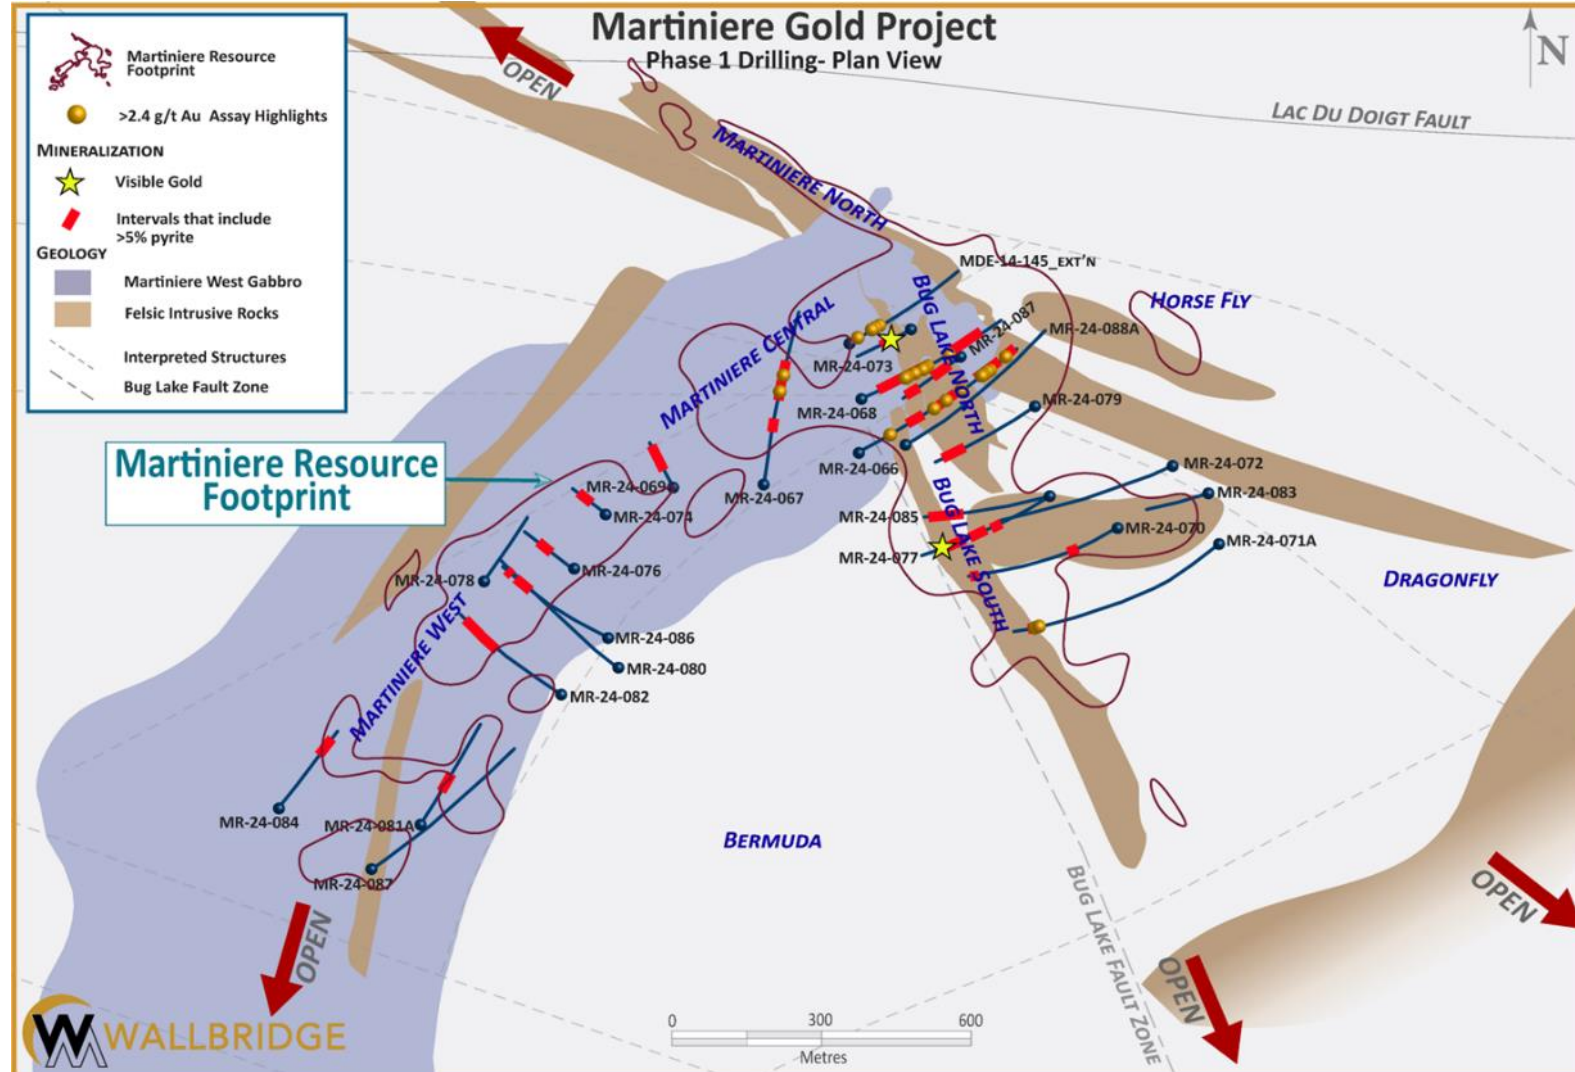

New Gold-Bearing Jeremie Diorite and Extensions of Known Zones At Fenelon

Martiniere Q1-Q2 2024 Exploration Advances

Martiniere Technical Studies | Metallurgical & Geotechnical Drilling

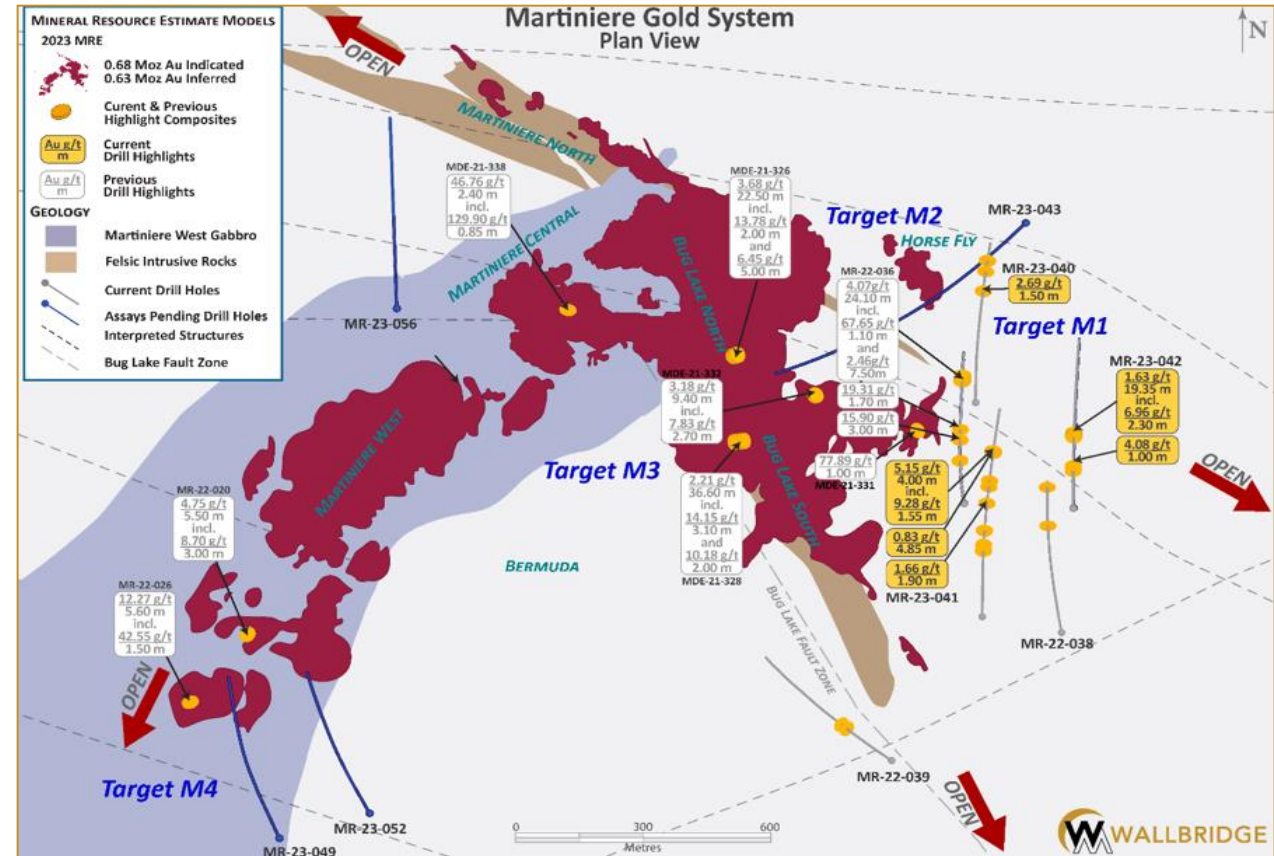

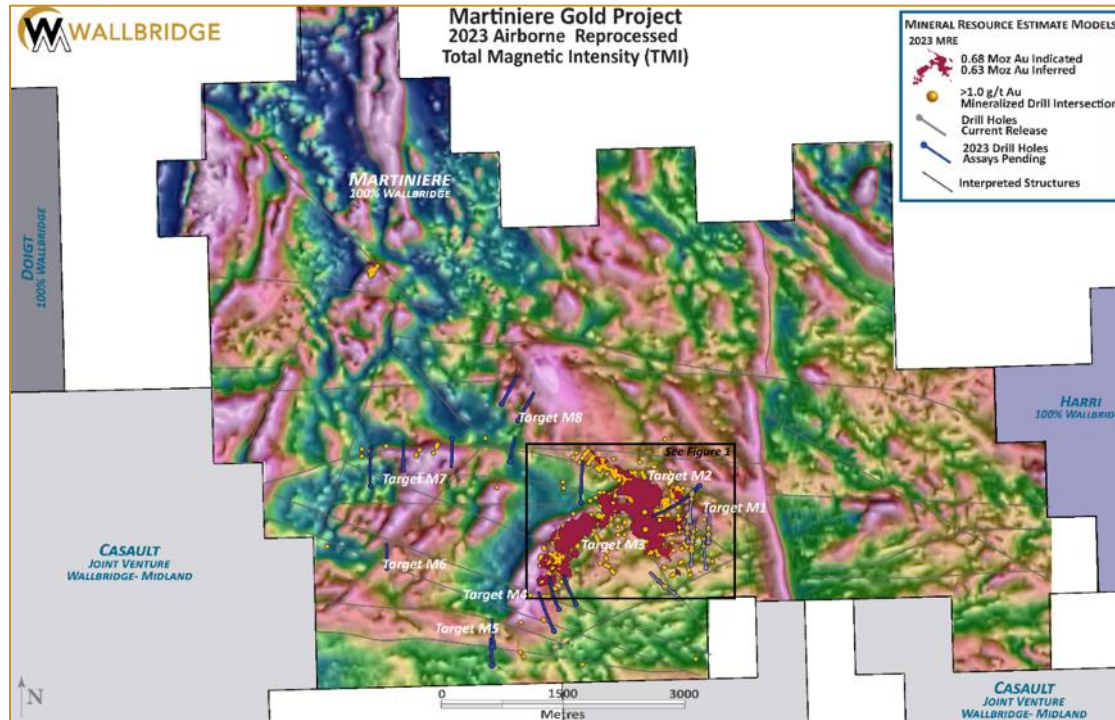

Program Highlights

- 27 holes totaling 8,439 metres targeting Martiniere West, Central and North, Bug Lake zones
- Drilling provides representative coverage for metallurgical and geotechnical characterization of currently defined mineral resource
- Strong sulfide (\pm gold) mineralization intercepted in majority of holes - *Final assays pending*
- Geologic modeling is in progress to support ongoing technical studies for combined Fenelon – Martiniere PEA

2023 Exploration Drilling

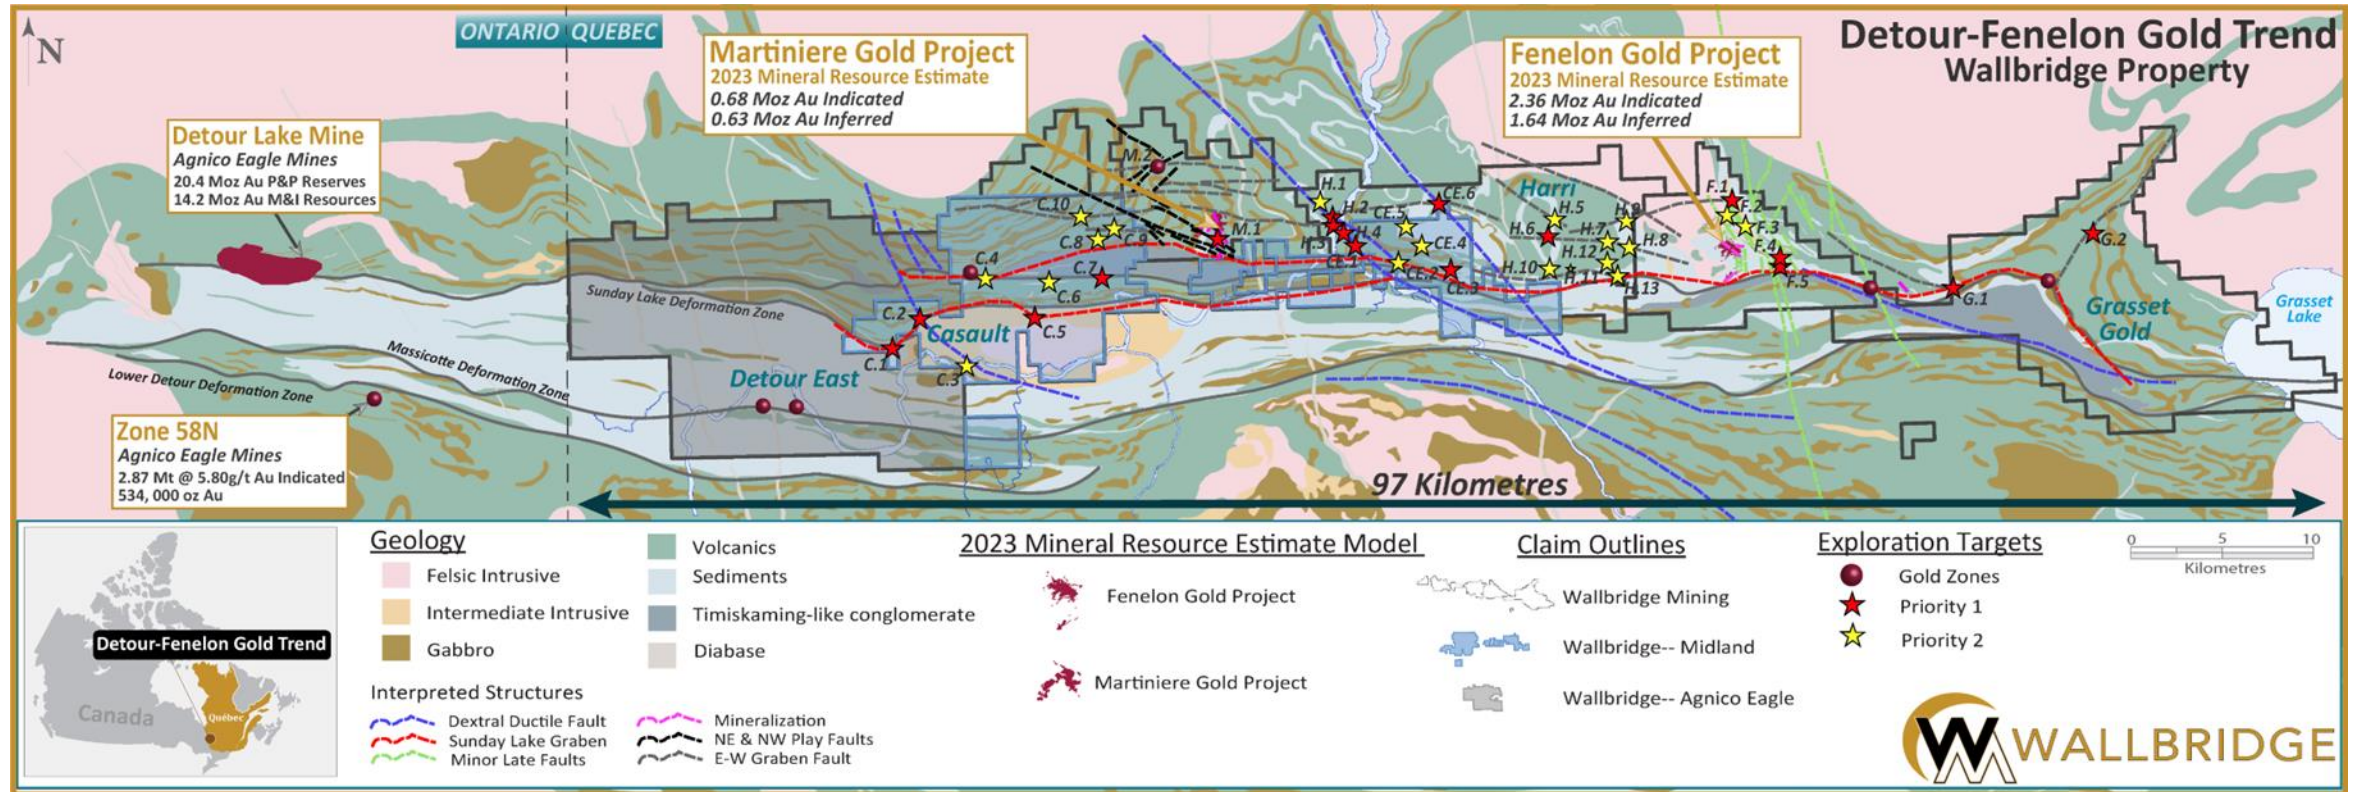

Martiniere Step-out Drilling

Significant Untested Discovery Potential

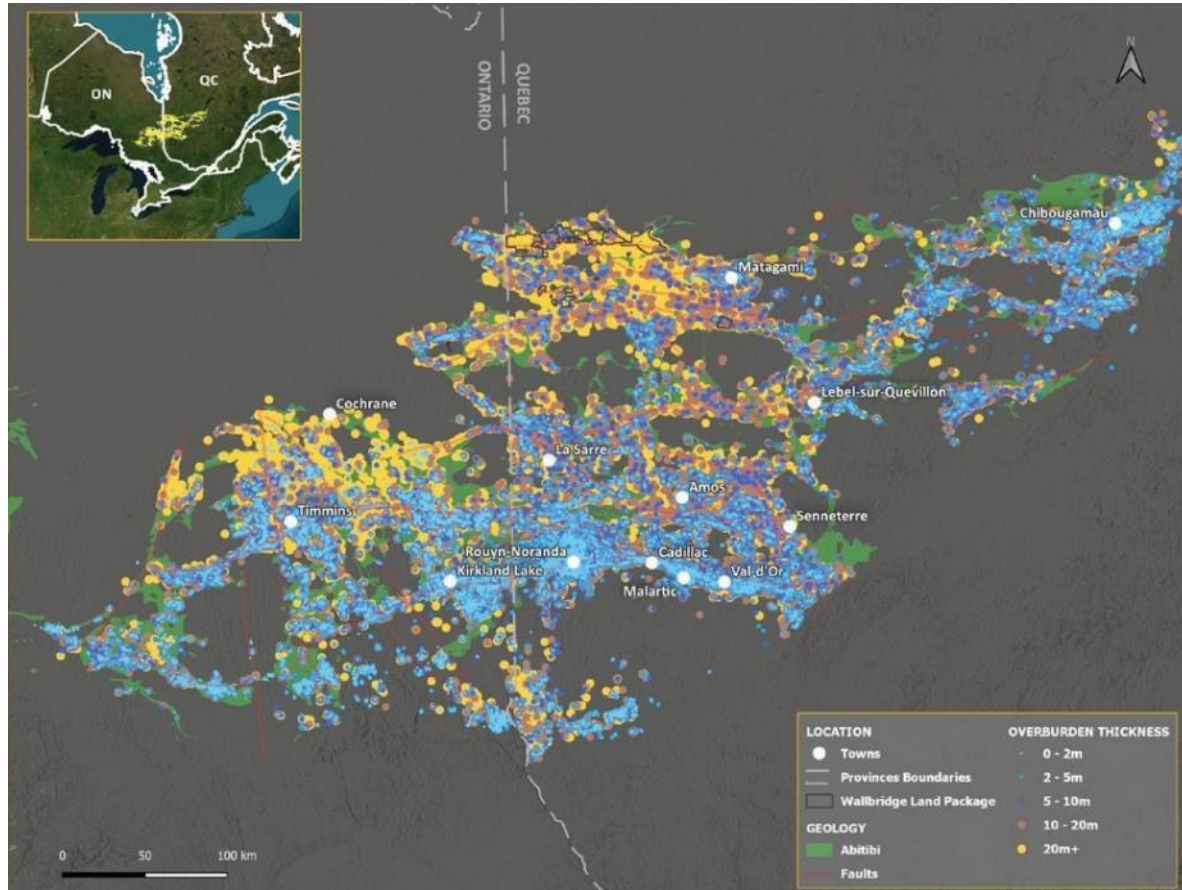

Detour – Fenelon Gold Trend: One of the Abitibi's least explored gold belts

- Host to Agnico Eagle's Detour Lake Gold Mine (2P @ 19.9 Moz + M&I @ 17.6 Moz @ Dec 31'23), Canada's largest producing gold mine
- Wallbridge controls 830 sq km consolidated mineral rights covering 97 km of prospective ground as trend extends to east into northern Quebec
- WM assets include Fenelon (PEA stage) and Martiniere (resource stage) projects plus large portfolio of regional greenfields exploration targets

Abitibi Greenstone Belt

Overburden Thickness

- Northwestern Abitibi covered with deep overburden, hindering past exploration efforts

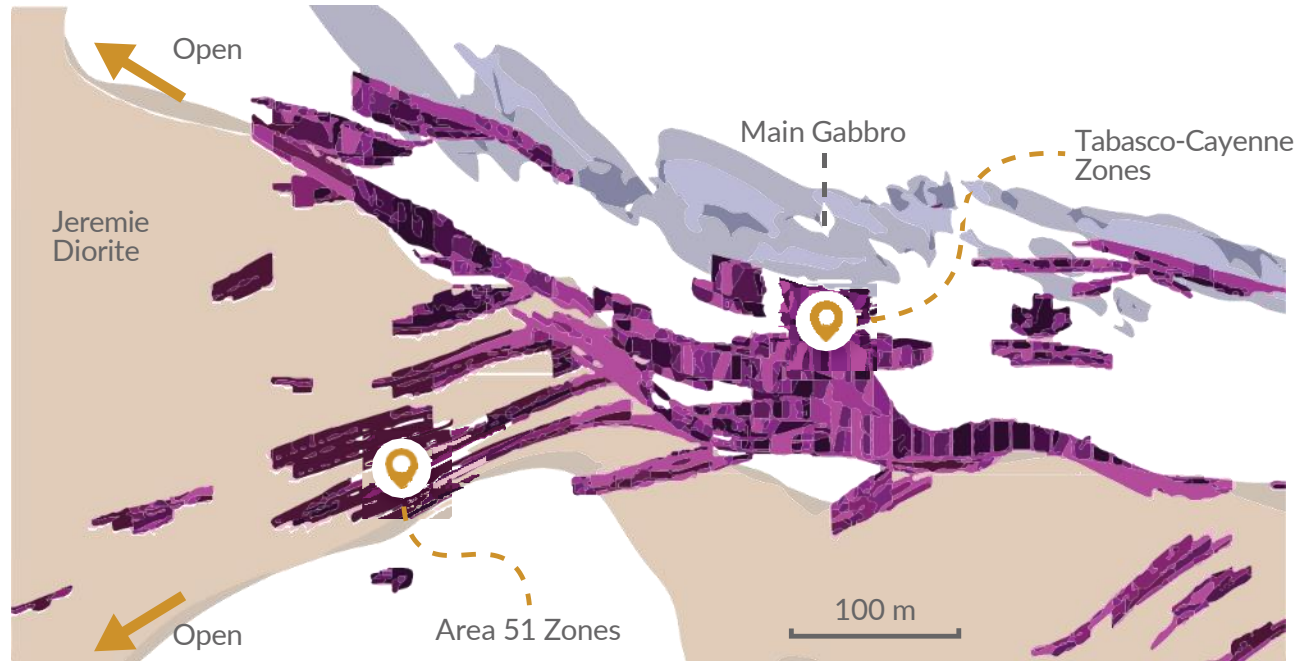

- Discovered: 1994-1997
- +5M oz Au known endowment on Quebec side (Wallbridge land package); 40 Moz at Detour Lake
- Very few outcrops

- Discovered: 1906-1911
- +100M oz Au known endowment
- Outcropping gold mineralization

Why Underground Bulk Mining?

Tabasco-Cayenne Zones

Plan view, 600 m depth

- Excellent along strike and down-dip continuity along diorite contact
- Multiple zones within a mineralized corridor tens of metres in width, controlled by shearing and stratigraphy
- Amenable to transverse mining
- Characteristic wide drill hole intersections:
 - 4.84 g/t Au over 56.00 metres (FA-20-128)
 - 4.06 g/t Au over 51.70 metres (FA-20-134)
 - 3.48 g/t Au over 54.00 metres (FA-20-197)
 - 4.31 g/t Au over 32.50 metres (FA-19-096)
 - 3.71 g/t Au over 42.50 metres (FA-20-203)

Area 51 Zones

Plan view, 475 m depth

- Good continuity and concentration of veins/shear zone network hosted by Jeremie Diorite
- Amenable to long-hole stoping or transverse mining
- Characteristic drillhole intersections:
 - 2.06 g/t Au over 38.50 metres (FA-20-115)
 - 1.93 g/t Au over 13.50 metres (FA-21-264A)
 - 1.70 g/t Au over 58.50 metres (FA-20-116)
 - 2.25 g/t Au over 19.65 metres (FA-20-191)
 - 3.28 g/t Au over 17.60 metres (FA-19-059)

2023 Mineral Resource Update

Fenelon Gold Project – Bulk Mineable

Looking West

Looking North

Fenelon Underground

- 21.67M tonnes @3.40 g/t - 2.37M Oz Indicated*
- 18.48M tonnes@ 2.89 g/t -1.72M Oz Inferred*
- Cut-off grade calculated at 1.5 g/t
- Resource to ~1,000m deep
- Gold ounces-per-vertical metres (avg. 4,000)
- Open in all directions
- 212,000 oz/yr, 7,000 tonnes per day (2023 PEA¹)
- US\$924/oz AISC (2023 PEA)

Looking North

Alamos Gold's Young Davidson

- Mineral Resource preceding production of 3.16 Moz@ 3.04 g/t
- Cut-off grade calculated at 1.5 g/t
- 1,500m to 1,800m deep
- Production grade of 2.34 g/t
- 200,000 oz/yr production (~8,000 tonnes per day)
- US\$1,133/oz AISC

For details of the 2023 MRE, please refer to Amended and Restated NI 43-101 Technical Report filed on December 29, 2023, on SEDAR+. For cautionary notes and definitions related to the 2023 PEA, please refer to page 2 of this presentation

Fenelon PEA

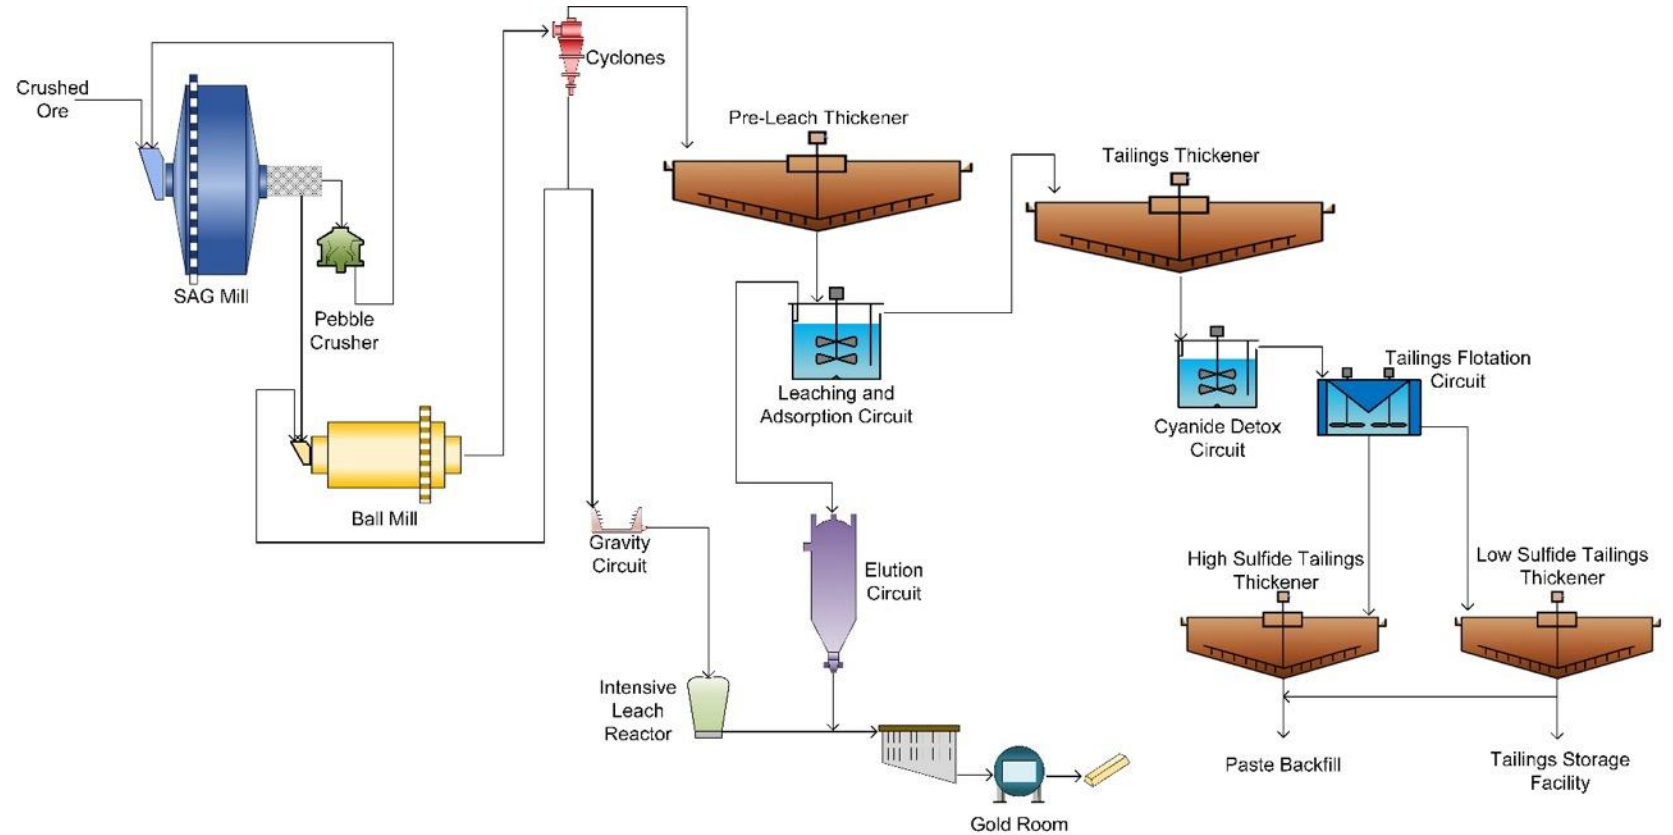

Metallurgy & Processing, A Simple Flowsheet

Metallurgy

- **Metallurgical Testing:**
 - Testing representative Tabasco-Cayenne & Area 51 material
- **Gravity Gold Recoveries**
 - up to 66.5% for Tabasco/Cayenne
 - up to 84.3% for Area 51
- **Cyanidation and flotation testing**
- **Overall Gold Recovery: 96%**

Processing

- **A simple flowsheet**
 - Gravity, CIL, Elution, Gold Room
 - Flotation on detox residue to produce desulfurized tailings

Fenelon PEA-Study Team

An Assembly of Expertise

Consulting Firms	Area of Responsibility	Qualified Person
InnovExplo Inc.	– Mineral Resources	– Carl Pelletier, P.Geo., – Vincent Nadeau-Benoit, P.Geo., – Simon Boudreau, P.Eng., – Marc R, Beauvais, P.Eng.
InnovExplo Inc.	– Mine design and scheduling, mine capital, and operating costs; G&A cost estimates and financial analysis	– Marc R, Beauvais, P.Eng.
G-Mining Services	– Metallurgy, processing plant design, capital, and operating cost estimates	– Martin Houde, P. Eng.
BBA Inc.	– Tailings management site design, capital, and operating costs; and reclamation costs.	– Luciano Piciacchia, P.Eng., Ph.D. – Mélanie Turgeon, P.Eng.
WSP	– Infrastructure & material handling, and capital cost estimate. – Rock mass classification, and stope design. – Environment	– Jonathan Cloutier, P.Eng. – André Harvey, Eng. – Nathalie Fortin, P.Eng., M.Env.
Responsible Mining Solutions Corp.	– Paste plant design, capital, and operating costs.	– Roberge, Jean-Louis, Eng.
ASDR Canada Inc.	– Water treatment plant design, capital, and operating costs. – UG dewatering design, capital, and operating costs.	– Dan Chen, P. Eng. – Martin Lessard, Eng.
Hydro-Resources Inc.	– Mine hydrogeology and site hydrology.	– Michael Verreault, Eng., M.Sc. A.
